Mountain Weather Forecast

Snowdonia National Park

Forecast valid from 06:00 on Saturday 28 Nov 2020 until 23:59 on Sunday 29 Nov 2020

Forecast Issued on Saturday 28 Nov 2020 at 00:50

Confidence: Cloud cover and extent of poor visibility holds the most uncertainty in the forecast, with some marked variations likely across Snowdonia at times. High for wind strengths and temperatures.

Headline for Saturday 28 Nov 2020: Low cloud and poor visibility dominating conditions. Best shelter across the west.

Mountain weather hazards on Saturday 28 Nov 2020

Blizzards No Likelihood	**Heavy Snow** No Likelihood	**Storm force winds** No Likelihood
Gales No Likelihood	**Severe chill effect** No Likelihood	**Poor visibility** High Likelihood
Thunderstorms No Likelihood	**Heavy persistent rain** No Likelihood	**Strong sunlight** No Likelihood

Precipitation probability					
70%	40%	60%	30%	20%	10%

Forecast for Saturday 28 Nov 2020

Weather: Today will be dominated by extensive low cloud across most areas, with the south and east seeing few if any breaks. The best of any cloud breaks will be across sheltered western foothills and the Snowdon area, and any breaks are most likely early today before cloud generally thickens. Spells of light and drizzle will accompany this cloud, especially this morning and early afternoon. Becoming largely dry later this afternoon and this evening.

Chance of cloud free mountain/hill tops above 800m: 60% across the far west at first but soon decreasing 20%, otherwise virtually no chance with cloud extensive above 300-500m.

Visibility: Mist or fog will dominate above modest elevations but the far west and northwest will see some moderate to good visibility, especially at first.

Freezing Level*	1500m	1700m	1800m	2000m	2000m	2000m	2000m

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Poor visibility hampering navigation for much, if not all, of today. Best of any shelter across western foothills.

Forecast for Sunday 29 Nov 2020

Weather: Another mainly overcast and rather dull day with persistent hill fog across most areas, as well as in the valleys at times. However, some bright or sunny spells are possible through the afternoon, most likely across western areas.

Maximum wind: 5-10mph, variable in direction.

Chance of cloud free mountain/hill tops above 800m: Zero overnight, for the morning and evening, with cloud rather extensive and persistent above 300-500m. Through the afternoon possibly improving 30% across western areas.

Visibility: Expected to be generally no more than a kilometre or two above modest elevations. Much improved at low levels, with locally very good visibility possible for sheltered western areas in the afternoon.

Temperature: **Valleys:** 6 to 8 Celsius.
At 800m: 2 to 4 Celsius.
Freezing level: Above summits.
